Model EV is a high-performing, segmented rotary thermal wheel in for industrial and marine ventilation applications. Typical temperature efficiencies are up to 90%.

Thanks to its segmented wheel Model EV facilitates onsite installation or replacement in narrow spaces. It also provides for lower transportation costs.

It is possible to make adjustments to the position of the shaft in all directions for a perfectly balanced fit in the air handling unit.

Model EV is certified according to Eurovent and AHRI.

With casing Model EV is called Model EQ.
